The first problem was

that it would not let me download the theme because of my internet connection and I had to use a static ip.

Anyway, the next time I downloaded the theme it said that my theme was already a theme so I just went out and bought a

What's New in the?

My own installation is using a smaller picture. On the small one I can clearly see the mountain peak, and in the Windows 7 theme preview I see the full picture. This was the task of a scaling. This

picture is a very high-resolution picture, so my Mac had trouble with it. But the Mac handled it just fine. I just didn't recognize the theme. Until I found it on the web. So it was just a standard theme I downloaded. From a non-official website. I have no idea if it's from Microsoft or that website. I don't even know who makes this theme. So don't know if it's good enough to use. I know that Microsoft is not a good company to do themes with. Like they didn't bother to make a Windows 7 theme for their own OS. A friend of

mine is switching from Windows to Mac, and asked me if I can install Windows 7 for him. I told him that maybe I can. Since he's a good programmer. But installing a Win 7 PC isn't a good idea for his Mac computer. It does everything that Windows 7 is supposed to do. When I started to read the theme description, the first word that stood out to me was "beautiful". Beautiful the very word I'd like to see in any theme. It's really hard to find themes with the word "beautiful" in it. Once I downloaded the theme, I

really liked it. And the picture made it look really cool to me. If it was in any other theme, it wouldn't be. But it was in that theme, so it was good. So I had to find out how I can install it and use it. Tried to install it on all computers. Then I noticed that the theme was Windows 7 32 bit. So I had to find out where I can get the Windows 7 32 bit file. To the web. I was quite surprised how easy it was. The download process was just a bit confusing. Now that I finally had it installed. I tried to install it on my Mac and I can't. But on all my

Windows 7 PCs. Now I have the theme. I like it. It works just great. It's a great theme. One that is not really new, but old. It
